The figure displays four line plots, each representing a different distribution (A, C, G, T) over a position range of 0 to 150. Each plot has a title 'Opposite=0' and a y-axis labeled 'Overlap=0'. The x-axis is labeled 'Position'. The distributions are represented by different colored lines: red, green, blue, and purple. The G distribution shows a significant peak around position 100, while the others remain relatively flat.
